

Démarrage et installation d'Ubuntu Server

1. **Démarrez la machine virtuelle** en sélectionnant la VM créée et en cliquant sur “Démarrer”.
2. **Accédez à la console** de la VM via l’interface vSphere. Cela vous permettra de voir le processus d’installation.
3. La machine virtuelle démarrera à partir de l’image ISO et vous serez accueilli par le menu d’installation d’Ubuntu Server.
4. **Suivez les étapes d’installation** classiques d'Ubuntu :
 - Sélectionnez la langue.

- Faire une mise à jour de l'installer si nécessaire.

Installer update available

Version 24.08.1 of the installer is now available (24.04.1 is currently running).

You can read the release notes for each version at:

<https://github.com/canonical/subiquity/releases>

If you choose to update, the update will be downloaded and the installation will continue from here.

```
[ Update to the new installer ]  
[ Continue without updating  ]  
[ Back                      ]
```

- Choisir la disposition du clavier.

Keyboard configuration

Please select your keyboard layout below, or select "Identify keyboard" to detect your layout automatically.

Layout: [Belgian ▼]

Variant: [Belgian ▼]

[Identify keyboard]

[Done]

[Back]

- Choisissez l'option d'installation "Ubuntu Server".

Choose the type of installation

Choose the base for the installation.

☒ Ubuntu Server

The default install contains a curated set of packages that provide a comfortable experience for operation.

☐ Ubuntu Server (minimized)

This version has been customized to have a small runtime footprint in environments where humans are not in.

Additional options

☐ Search for third-party drivers

This software is subject to license terms included with its documentation. Some is proprietary. Third-party should not be installed on systems that will be used for FIPS or the real-time kernel.

[Done]
[Back]

- Configurez les paramètres réseau (automatique avec DHCP ou manuel si vous avez une IP statique).

Network configuration

Configure at least one interface this server can use to talk to other machines, and which preferably provides access for updates.

NAME	TYPE	NOTES
[ens160	eth	- ▶]
DHCPv4 172.16.1.100/16		
00:0c:29:fe:6e:33 / VMware / VMXNET3 Ethernet Controller		
[Create bond ▶]		

[Done]
[Back]

- (facultatif) Introduisez les informations de votre proxy.

Proxy configuration

If this system requires a proxy to connect to the internet, enter its details here.

Proxy address:

If you need to use a HTTP proxy to access the outside world, enter the proxy information here
leave this blank.

The proxy information should be given in the standard form of "http://[[user][:pass]@]host[:p

[Done]

[Back]

- Configurez le partitionnement : Choisissez le partitionnement automatique sauf si vous avez des préférences spécifiques.

Guided storage configuration

Configure a guided storage layout, or create a custom one:

(X) Use an entire disk

[/dev/sda local disk 16.000G ▼]

[X] Set up this disk as an LVM group

[] Encrypt the LVM group with LUKS

Passphrase:

Confirm passphrase:

[] Also create a recovery key

The key will be stored as ~/recovery-key.txt in the live system and will
/var/log/installer/ in the target system.

() Custom storage layout

Confirm destructive action

Selecting Continue below will begin the installation process and result in the loss of data on the disks selected to be formatted.

You will not be able to return to this or a previous screen once the installation has started.

Are you sure you want to continue?

[No]
[Continue]

- Créez un compte utilisateur administrateur et définissez le mot de passe.

Profile configuration

Enter the username and password you will use to log in to the system. You can configure SSH access on a later date. A root password is still needed for sudo.

Your name:

marc

Your servers name:

m1etest

The name it uses when it talks to other computers.

Pick a username:

marc

Choose a password:

Confirm your password:

*****_

[Done]

- Installez le server SSH pour les accès distants.

SSH configuration

You can choose to install the OpenSSH server package to enable secure remote access to your server.

[X] Install OpenSSH server

[X] Allow password authentication over SSH

[Import SSH key ►]

AUTHORIZED KEYS

No authorized key

[Done]
[Back]

- Installez les mises à jour de sécurité et sélectionnez des logiciels additionnels si nécessaire.
